

Nokia Mandatory Training 2025 – Complete Notes

1. Safety and Security Training (Completed)

Duration: 30 minutes

Topics Covered

1. Life Saving Rules

- Non-negotiable safety requirements designed to protect employees in all environments.
- Every employee must understand and strictly follow these rules.
- Examples:
 - Always use safety gear when required.
 - Report unsafe conditions immediately.
 - Never bypass safety controls.

2. Physical Security

- Focuses on protecting people, property, and information in the workplace.
- Includes:
 - **Office Security Protocols:** Badge access, visitor management, restricted zones.
 - **Travel Security:** Guidance for Nokia employees traveling to customer or remote locations (via Nokia Concur).
 - **Emergency Contact:** GSOC Global Security Operations Center provides global assistance.

3. Health and Safety in Projects

- Promotes best practices in maintaining a safe working environment during customer projects.
- Includes risk assessments, site safety briefings, and compliance with customer safety guidelines.

4. Incident Reporting

- **Purpose:** To ensure that all health, safety, or security incidents are reported promptly.
- **Process:**
 - Report to your supervisor or use Nokia's internal reporting system.

- Includes near misses, accidents, security breaches, and injuries.
- Enables corrective actions and continuous improvement.

5. Wellbeing

- Emphasizes maintaining personal wellbeing and mental health.
- Access to Nokia’s global wellbeing resources, counseling, and stress management programs.
- Encourages work-life balance and ergonomic workplace setup.

Additional Notes

- **Sitting Posture:** Maintain ergonomic posture—straight back, monitor at eye level, proper chair adjustment.
 - **Nokia SOS (Emergency):** +44 207 365 9626
 - **Nokia Concur:** Platform for travel booking and expense management.
 - **GSOC (Global Security Operations Center):** +1 469 661 3018, security@nokia.com
-

2. Ethical Business Training (Completed)

Duration: 45 minutes

Key Takeaways

- Ensures employees adhere to Nokia’s Code of Conduct and ethical principles.
 - Covers:
 - **Anti-bribery and corruption policies**
 - **Fair competition practices**
 - **Respecting confidentiality and privacy**
 - **Responsible use of company resources**
 - **Reporting unethical behavior (whistleblower protection)**
-

3. Information Security and Privacy Awareness (Completed)

Duration: 25 minutes

Main Topics

- **Information Security Basics:** Protecting Nokia and customer data from unauthorized access or leaks.
- **Data Privacy:** Understanding GDPR and personal data handling.

- **Cyber Threat Awareness:** Phishing, malware, and social engineering prevention.
- **Best Practices:**
 - Use strong passwords and MFA.
 - Lock screen when away.
 - Avoid sharing sensitive information via unsecured channels.

Nokia Flow One Training Overview

4. Nokia Flow One Overview

Course ID: DO00647-K-2300

4.1. Service Fulfilment and FTTx Introduction

Key Concepts

Term	Description
Optical Networks	High-speed networks that transmit data via light over optical fibers.
OLT (Optical Line Terminal)	Located at the central office; connects to multiple ONTs via optical splitters.
Splitter	Divides a single optical signal into multiple paths to serve multiple customers.
ONT (Optical Network Terminal)	Device at the customer premises that converts optical signals into electrical signals.
FTTx	Generic term for optical fiber broadband architecture (fiber-based access networks).
GPON	Gigabit Passive Optical Network – supports 2.5 Gbps downstream speed.

FTTx Variants:

- **FTTN (Fiber to the Node)** – Fiber reaches a cabinet near the customer; last mile via copper.
- **FTTC (Fiber to the Cabinet)** – Similar to FTTN but closer to end-users.

- **FTTB (Fiber to the Building)** – Fiber reaches the building’s basement.
- **FTTH (Fiber to the Home)** – Fiber directly to individual homes.

Network Flow Example: ONT → Splitter → OLT → HIS (High-Speed Internet) → VoIP (Voice over IP) → IPTV (Internet TV) → Central Office → Access Network → Transport Network

Triple Play Network:

- Offers **Voice, Video, and Data** over one broadband connection.
-

4.2. EX Flow One Catalog Driven Fulfillment (CDFF) Solution

Triple-Play Solution – Key Requirements

1. **Product Catalog Management**
 - Add new products quickly.
 - Update and maintain existing products efficiently.
 2. **Unified Order Tracking**
 - Centralized tracking of all service orders from submission to completion.
 3. **Manual Task Support**
 - System allows for human intervention where required.
 4. **Inventory System Integration**
 - Integrates with both physical and logical inventory systems.
 - Maintains subscriber profiles and service history.
-

4.3. Catalog-Driven Fulfillment (CDF) Process

- **Order Entry:** Customer request is submitted.
 - **Order Decomposition:** The system breaks the order into sub-tasks.
 - **Provision and Installation:** Network and system provisioning occur.
 - **Completed Order:** Service becomes active and operational.
-

4.4. CDPA (Catalog-Driven Provisioning and Activation)

Purpose: Automates how customer orders are provisioned and activated based on catalog definitions.

Core Concepts

Term	Description
Catalog	Blueprint that defines how services are structured, ordered, and delivered.
Provisioning and Activation	Execution of service configuration in network systems.
CFS (Customer Facing Service)	Represents what the customer experiences (e.g., Internet service).
RFS (Resource Facing Service)	Underlying network resources required to deliver CFS.
Remote Items	Include Technical Services, Technical Library, and Work Orders.
Selection Group	Group of components that must be embedded into another service or product.

CDPA Deployment Types

- **Traditional Deployment:** Installed on physical servers.
- **Cloud-Ready Deployment:** Deployed in virtualized/cloud environments.

Virtualized CDPA (VNFM)

- Deployed as **VNFM – Virtualized Network Function Manager**
- Managed via **Cloud Band Application Manager (CBAM)**

4.5. UIV (Unified Inventory and Visualization)

Purpose Provides centralized inventory management and visualization for services and resources.

UIV Components

Component	Description
RESTful API Layer	Allows integration with external systems and automation tools.
Discovery and Reconciliation	Automatically identifies and syncs network and service inventory.
Neo4j Graph Database	Stores relationships between network elements, services, and customers.

UIV Deployment

- Uses **CSPF (Common Software Foundation Platform)** for deploying Flow One, Orchestration, and Assurance components.
-

5. Flow One Introduction to Catalog

Course ID: DO00545-K-2300

5.1. Catalog Features

- **SOAP-based APIs** – For integration with external systems.
 - **Technical Capabilities** – Defines reusable service capabilities.
 - **Catalog Designer** – Tool used to design and manage catalog items.
 - **Catalog Models** – Represent different service and product hierarchies.
 - **Lifecycle Management** – Manages creation, update, and retirement of catalog items.
 - **Third-Party Sourcing** – Supports integration of external vendor products.
 - **Product Rules and Dependencies** – Define how services interact or depend on each other.
 - **Process Design** – Defines workflows for service fulfillment.
-

5.2. Flow One Fulfillment Overview

- An **end-to-end network service management platform**.
 - Covers:
 - Service order capture
 - Service design and decomposition
 - Network provisioning
 - Activation and delivery
-

5.3. Service Model Structure

Level	Description
Customer Facing Service (CFS)	Defines what customers purchase (e.g., broadband, IPTV).
Resource Facing Service (RFS)	Technical representation of the service in the network.

Level	Description
Technical Service (TS)	Lowest level technical function that supports the RFS (e.g., IP address allocation).

5.4. Catalog Service Items

Item	Description
Technical Service (TS)	Specification of network-level capabilities such as configuration or connectivity.
Technical Library (TL)	Reusable data sets used for enrichment or reference.
Work Order (WO)	Manual task assigned to field engineers or technicians.

5.5. Error Recovery and Transactions

Default Catalog Transactions

- **Provide** – Deliver a new service.
- **Amend** – Modify an existing service with additional options.
- **Cease** – Terminate a service.
- **Create** – Build new elements or configurations.
- **Modify** – Change configuration or parameters.
- **Delete** – Remove an existing item.
- **Display** – Retrieve information for monitoring or reporting.

Fulfillment Request or Task Types

- **Create** – Establish a new service.
- **Modify** – Change service configuration.
- **Delete** – Remove a service.
- **Display** – Show service details.

Undo Transaction

- Equivalent to a **Rollback** operation to revert changes if an error occurs.

6. Flow One eLearning Subscription Curriculum

Course ID: DO00592-G-2100

This subscription provides continuous learning access to Nokia Flow One modules, including:

- **Service Fulfillment Overview**
- **Catalog Management**
- **Provisioning and Activation Concepts**
- **Unified Inventory and Orchestration**
- **Advanced Topics in Flow One Automation**
