

NSW CS&C KMCD – Nokia Software CS&C and AS&C Mode of Operation (MoO)

Introduction

Nokia Software's **Services and Care (S&C)** organizations — including **Core Services & Care (CS&C)** and **Applications Services & Care (AS&C)** — provide global support and expertise to customers. As business models evolve, the **new Mode of Operation (MoO)** defines how **Core, Applications, and Presales** teams collaborate to **sell, implement, and maintain** world-class projects effectively.

Objective of the Updated MoO

- Establish a **unified operating model** across CS&C, AS&C, and Presales.
 - Ensure **end-to-end (E2E) accountability** and **ownership** for projects.
 - Promote **cross-BU (Business Unit)** collaboration for efficiency and transparency.
 - Strengthen **customer satisfaction** through clearer engagement models and governance.
-

Scope of the MoO

The MoO applies to:

1. **Core-led cases and projects** involving Apps products and services (and vice versa).
2. **CBIS/CBAM cases or projects** under joint responsibility.

It covers all **new and ongoing projects** in the **pre-acceptance phase**, unless an exception is approved by global CS&C and AS&C leaders.

Key Principles of End-to-End (E2E) Accountability

1. BU Ownership and Responsibility

Each **Business Unit (BU)** is responsible for its own:

- Services, portfolio, and subdomains
 - Business and delivery execution
 - Sales, capability definition, and resource planning
 - Demand–supply balance and forecast accuracy
-

2. Lead BU Decision at SELL Process (Gate 3)

- The **Lead BG/BU** (either Core or Apps) is defined at **Gate 3** of the SELL process.
 - Gate 3 determines which BU leads **Presales, delivery, and care** activities.
 - Lead BU is decided based on **portfolio ownership** or a **joint agreement** among:
 - **GBC Market Presales Heads**
 - **CS&C Market Heads**
 - **AS&C Market Heads**
-

3. Reciprocal Principle in Presales

- **Apps Presales (GBC Apps)** leads **AS&C services Scope of Work (SoW)** and **resource estimation**, even for Core-led opportunities.
 - **Core Presales (GBC Core)** leads **CS&C services SoW** and resource estimation, even for Apps-led opportunities. ☑ Ensures that **each BU defines its own services scope** and supports consistent presales accuracy.
-

4. Delivery Phase Responsibilities

- The **Lead BU Delivery Organization** assigns **one single Customer Project Manager (CPM)** to manage and coordinate the overall engagement.
- The **Lead BU Project Manager**:
 - Is **accountable for total project scope and delivery**

- o **Coordinates** with the other BU's delivery organization
 - Each **non-lead BU** remains accountable for:
 - o Its specific deliverables
 - o Resource allocation
 - o Timely delivery of its part of the project
-

5. Reciprocal Principle in Care

After the **delivery-to-care handover**:

- Each BU is **responsible for its own product or solution support**, regardless of which BU led the project during delivery.
 - Promotes independence and clear ownership during post-delivery maintenance and care.
-

6. Financial Accountability

- The **Lead BU Project Manager**:
 - o Forecasts and reports **total project revenue** (covering both CS&C and AS&C components)
 - **CS&C Market Services**:
 - o Forecasts **revenues and margins for CBIS/CBAM**, though they remain under **Apps P&L**
 - In **dilutive projects** (financially negative cases):
 - o The **Lead BU PM** drives the **recovery plan** with support from the other BU.
 - o Escalations handled at **project, Market Unit (MU), or market** level.
-

7. Governance and Oversight

- **Monthly governance meetings** are led by **CS&C and AS&C/GBC leaders**.
- Purpose:
 - o Track **implementation progress** of the global MoO.
 - o Review **performance, accountability, and collaboration metrics**.

- o Resolve **cross-BU challenges** proactively.
-

Benefits of the Updated MoO

Benefit	Description
End-to-End Ownership	Ensures single-point accountability throughout the project lifecycle.
Clear Engagement Model	Defines BU roles and responsibilities transparently.
Improved Collaboration	Strengthens coordination between Core and Apps teams.
Operational Efficiency	Reduces duplication and streamlines Presales and Delivery workflows.
Enhanced Customer Satisfaction	Provides unified engagement and consistent service experience.
Financial Clarity	Enables better forecasting and accountability for project profitability.

Applicability

- Applies to **all active and new projects** under **pre-acceptance** phase.
 - **Exceptions** can only be approved by **global CS&C and AS&C leadership**.
-

Summary at a Glance

Area	Core Responsibility
Presales	Reciprocal leadership (Core leads CS&C; Apps leads AS&C scope)
Delivery	Lead BU assigns single PM; others deliver per defined scope
Care	Each BU supports its own products post-handover

Area	Core Responsibility
Financials	Lead BU forecasts full revenue; others forecast per scope
Governance	Monthly CS&C-AS&C leadership review meetings
Goal	Seamless collaboration, E2E accountability, and global consistency

Final Takeaway

The **updated MoO for Nokia Software CS&C and AS&C** reinforces:

- **Cross-BU collaboration**
- **Clear accountability**
- **Unified customer engagement**
- **Strong governance for operational excellence**

It ensures that **Core and Apps organizations work seamlessly** across presales, delivery, and care—supporting Nokia Software’s commitment to **world-class, end-to-end service delivery**.
